

DESTINATION MOON

RED

Destination Moon, a co-creation between L'Épée 1839 and MB&F, is the quintessential torpedo-shaped rocket of childhood dreams. But look more closely and you will see that its minimalistic form is evocative rather than definitive.

Manufactured in Blue, Green, Silver and Black, 'Destination Moon' is now available in Red.

The eight-day movement follows the same basic architecture and design of an actual space rocket. The power is located on the bottom with the crown to wind the movement, the regulation is in the middle with the gear chain and the escapement, and the time and the time setting crown is located at the top.

In ode to childhood toys and fantasies, we had to create a Captain to command the spaceship – Neil, the smile-inducing, space-suited figurine forged in solid Silver is magnetically attached to the ladder connecting the crown to the movement. Neil is the astronaut piloting the Destination Moon to the distant universe of your office or display room.

TECHNICAL SPECIFICATIONS

Limited edition of 50 pieces

Hours and minutes are indicated on rotating stainless steel discs

Multi-stage vertical architecture

Incabloc shock protection system

Balance frequency: 2.5 Hz / 18,000 bph - Power reserve of 8 days

Movement components: 164 - Jewels: 17

Dimensions: 41.4 cm high x 23.3 cm diameter - Weight: 4 kg

Materials: Palladium-plated brass, Red anodized aluminum, stainless steel and Silver

Finishings: polishing, bead blasting & satin finishing

Winding: manually by rotating the propulsion wheel at the base of the rocket

Time setting: knob at the top of the movement, above the indication rings
